

PUBLIC TRANSPORTATION ANALYSIS

TEAM MEMBER

NAME: N H CHETHAN

ROLL NO.: 211521104095

TEAM MEMBERS

1. D.YOGESH
2. C ESWAR SAI
3. M L S N D PRABHAS
4. B.S.ATHISH

Phase 4: Development Part 2

PROBLEMS DEFINITION:

The project involves analyzing public transportation data to assess service efficiency, on time performance, and passenger feedback. The objective is to provide insights that support transportation improvement initiatives and enhance the overall public transportation experience. This project includes defining analysis objectives, collecting transportation data, designing relevant visualizations in IBM Cognos, and using code for data analysis.

Dashboards and reports in IBM Cognos to visualize on-time performance, passenger feedback, and service efficiency metrics:

Code for data analysis in plain text formate:

```
import pandas as pd
```

```
# Step 2: Data Exploration
```

```
print(df.head())
```

```
print(df.isnull().sum())
```

```
print(df.describe())
```

```
# Step 3: Service Punctuality Rates (Example)
```

```
punctual_services = df[df['NumberOfBoardings'] > 2] # Example threshold for punctuality
```

```
punctuality_rate = len(punctual_services) / len(df) * 100 print(f"Punctuality Rate: {punctuality_rate}%")
```

```
# Step 4: Sentiment Analysis on Passenger Feedback (If available)
```

```
# You provided the column names but no feedback column was mentioned.
```

```
# If you have a column named 'Feedback', you can perform sentiment analysis on it.
```

```
# Step 5: Further Analysis and Visualization (Optional)
```

```
# Add additional analysis or visualization code here based on your project requirements.
```

Step 6: Generate Reports or Visualizations (Optional) # Add
code for generating reports or visualizations here.

Save the modified DataFrame if needed

df.to_csv('modified_dataset.csv', index=False) # Replace 'modified_dataset.csv' with desired file name

Real-Time Data Integration:

Include real-time data feeds for bus/train locations, estimated arrival times, and service disruptions. This data is crucial for both operators and passengers.

Route and Schedule Information:

Display route maps, schedules, and route-specific information to help passengers plan their journeys.

Service Alerts and Notifications:

Provide notifications about delays, service disruptions, or important announcements to keep passengers informed.

Crowd Monitoring:

Use data to estimate passenger loads on different routes or vehicles. This helps passengers choose less crowded options and operators to optimize service.

Performance Metrics:

Display key performance indicators like on-time performance, average travel times, and ridership trends for different routes.

Route Efficiency Analysis:

Analyze routes for efficiency, looking at factors like bus frequency, capacity utilization, and energy consumption.

Safety and Security:

Integrate data on safety and security measures, such as surveillance cameras, emergency buttons, and response times.

Fare Information:

Show ticket prices, payment options, and real-time updates on fare validation.

Accessibility Information:

Highlight accessibility features for passengers with disabilities, including wheelchair access, ramps, and elevators.

User Feedback:

Collect and display passenger feedback on the quality of service, cleanliness, and other aspects of the public transport system.

Environmental Impact:

Show data related to the environmental impact of public transport, such as emissions reductions, energy efficiency, and green initiatives.

Financial and Operational Data:

Provide financial data related to revenue, operating costs, and budgeting for public transport agencies.
